

Meeting of the ADF Working Groups: *Atopic Dermatitis and Skin Barrier*

Wednesday, 07.03.2017, 14:00-18:00

Room Mumbai
World Trade Center Zürich
Leutschenbachstrasse 95, CH-8050 Zurich, Switzerland

The indicated times include talk and discussion.

- 14:00 – 14:10 Introduction**
Stephan Weidinger, Leopold Eckhart
Kiel, Vienna
- 14:10 – 14:40 From basic research to clinical application: Developing pre-vascularized and pigmented human skin equivalents**
Ernst Reichmann
Tissue Biology Research Unit, University Children's Hospital Zurich, Zürich, Switzerland
- 14:40 – 15:10 New insights into biochemistry and function of epidermal barrier lipids**
Franz Radner
Institute of Molecular Biosciences, University of Graz, Graz, Austria
- 15:10 – 15:25 Filaggrin deficiency, epidermal lipids and cutaneous inflammation are associated with skin microbial configuration**
Hansjörg Baurecht
University Hospital Schleswig-Holstein, Kiel, Germany
- 15:25 – 15:40 Skin barrier function genes differentially correlated to resident Staphylococci in lesional and non-lesional skin in atopic eczema**
Matthias Reiger
Institute of Environmental Medicine, Technical University of Munich, Germany
- 15:40 – 16:00 Coffee break**
- 16:00 – 16:25 Patterns of chronic hand eczema: analysis of the CARPE registry data**
Dagmar Simon
Bern University Hospital, University of Bern, Berne, Switzerland
- 16:25 – 16:40 Baseline characteristics of patients with Atopic Dermatitis observed in the German AD Registry TREATgermany**
Dora Stölzl
University Hospital Schleswig-Holstein, Kiel, Germany
- 16:40 – 17:05 Secretome-based regeneration of skin wounds**
Michael Mildner
Medical University of Vienna, Vienna, Austria

- 17:05 – 17:20 Insights into the shared aetiology of atopic dermatitis, asthma and hay fever**
Elke Rodriguez
University Hospital Schleswig-Holstein, Kiel, Germany
- 17:20 – 17:35 Skin equivalents of non-conventional model species for the study of keratinocyte differentiation genes**
Julia Lachner
Medical University of Vienna, Vienna, Austria
- 17:35 – 17:50 Autophagy contributes differentially to the homeostasis of epidermis and skin appendages**
Supawadee Sukseree
Medical University of Vienna, Vienna, Austria
- 17:50 – 18:00 Discussion and planning of future working group meetings**
Working group members
